

HRMS Attendance & Payroll Automation

BRD – Business Requirement Document

1. Business Problem

The organization currently uses **manual attendance tracking** and **Excel-based payroll processing**, which has resulted in:

- Frequent payroll mismatches
- High manual effort for HR teams
- Delays in salary processing
- No single source of truth for attendance data
- Limited reporting and visibility for management

From a business perspective, the root issue is **lack of standardized and automated processes** for attendance and payroll management.

2. Business Objective

The objective of this initiative is to:

- Automate attendance and leave tracking
 - Reduce payroll calculation errors
 - Improve payroll processing efficiency
 - Provide real-time visibility through dashboards
 - Enable HR and management to make data-driven decisions
-

3. Stakeholders

Stakeholder	Role
HR Manager	Owns attendance and payroll processes
Payroll Executive	Daily operational user
Employees	Attendance and payslip users
Finance Team	Payroll validation
IT / System Team	System support and maintenance

4. Scope

In Scope

- Attendance capture
- Leave application and approval
- Payroll calculation based on attendance
- Attendance and payroll reporting

Out of Scope

- Recruitment and onboarding
- Performance management

- Training and learning modules
-

5. High-Level Business Requirements

- The business requires a centralized system for attendance tracking
 - Payroll must be calculated automatically based on attendance and leave data
 - HR must be able to validate and release payroll
 - Management should have access to summary reports and dashboards
-

6. Success Metrics (KPIs)

- Improvement in payroll accuracy
 - Reduction in payroll processing time
 - Reduction in manual HR effort
 - Decrease in payroll-related employee complaints
-
